

WILBA

MARKETING PROPOSAL

Facebook, done properly, for Monkey Joe's

One channel, two offers, and the retargeting engine we never switched on. The same budget, pointed at what actually drives redemptions.

Prepared by Jess, WILBA · Pointe Orlando and Winter Park · July 2026

THE CASE

The pilot already told us where the money works

We ran Google Search and Facebook side by side for the pilot. Facebook won, and it wasn't close. It brought in more real redemptions at roughly a third of the cost.

WHAT WE MEASURED	GOOGLE SEARCH	FACEBOOK AND INSTAGRAM
Spend (lifetime)	\$2,957 gross	\$1,071
Cost per lead	~\$20	\$3.59
Redemptions it drove	14	21
Cost per redemption	~\$147	~\$51

Google's conversion tracking hit a form bug during the pilot, so I treat its conversion figures as directional. The redemptions above come straight from GHL, and they're the number that matters.

Facebook drove more redemptions at a third of the cost. That's the whole argument.

TWO MORE REASONS

Google can't do the two things we most want

Parties are priced out of Search

"Birthday parties Orlando" runs \$25 to \$40 a click on Google. That's unworkable. On Facebook I reach the exact parent audience for about \$3 a lead, and parties are the highest value thing Monkey Joe's sells.

Retargeting has barely run

The warmest audience, people who already visited, watched, or joined the list, has had almost no spend behind it. It's the cheapest place to win and it's sitting switched off.

THE STRATEGY

Two offers up top, a retargeting engine underneath

TOP OF FUNNEL

50% off

Our best offer. Cold parents, drives weekday walk ins.

TOP OF FUNNEL

Birthdays

\$25 off a party. Never advertised before now.

THE ENGINE

Retargeting

Everyone who engaged, hit again with both offers.

RESULT

Redeem and book

Walk ins in store, parties booked with the code.

Cold ads for the two offers fill the audience. Retargeting then converts the people who leaned in. Every redemption ties back to Facebook because the tracking already carries the source into GHL. We proved that in the pilot.

CAMPAIGN STRUCTURE

Four clean campaigns, split by store

CAMPAIGN	STAGE	WHO	OFFER
50% off prospecting	Cold	Parents 25 to 45, 15 mile radius	50% off

CAMPAIGN	STAGE	WHO	OFFER
Birthday prospecting	Cold	Parents of 2 to 10 year olds	\$25 off party
Retargeting	Warm	Visitors, engagers, list, past redeemers	Both plus parties
Lookalikes (phase 2)	Cold	Lookalike of redeemers	50% off

Pointe Orlando and Winter Park run as separate ad sets, so budget and results stay clean by store. Placements across Feed, Stories and Reels.

CREATIVE

Angles that already work

- **"Active kids, happy hearts."** Michael's best performer, straight up.
- **Get the kids off the screen.** Indoor, active, out of the house.
- **Air conditioned fun.** Built for the hot, rainy Florida summer.
- **The easiest party you'll throw.** You bring the cake, we do the rest.

Short Reels of the play floor and party room, plus simple offer cards. Fresh creative every two to three weeks so it never goes stale.

BUDGET

Same spend, pointed at Facebook

LINE	PER STORE / MONTH	BOTH STORES
50% off prospecting	\$300	\$600
Birthday prospecting	\$200	\$400
Retargeting	\$250	\$500

LINE	PER STORE / MONTH	BOTH STORES
Total	\$750	\$1,500 / month

Weighted toward Winter Park once the data confirms its edge. Retargeting scales up as the warm audience grows.

TARGETS

What good looks like in 90 days

≤ \$4

Cost per lead
(pilot ran \$3.59)

≤ \$50

Cost per
redemption,
trending to \$35

3 to 4×

Redemptions as
retargeting turns
on

25

Warm party
enquiries already
waiting

THE BOTTOM LINE

Spend the same money on the channel that actually delivers

The pilot proved the model. \$4,027 in spend turned into 479 codes and 101 in store redemptions, and Facebook did the heavy lifting per dollar. The two biggest levers, retargeting and parties, are still switched off. Turn them on, on Facebook, and this compounds.

One channel. Two offers. Retargeting doing the work underneath. I'd like to build it.
